Gas Certification Institute Offers Accelerated Learning Track for Gas Measurement Professionals

HOUSTON, January 25, 2007 – Gas Certification Institute, LLC (GCI), a Houston-based training facility, announcing this month its two-week fundamental gas measurement certification boot camp designed to bring gas measurement professionals the quickest track to certification.

The program consists of five related courses condensed into a 10-day boot camp, combining classroom instruction with hands-on training. The GCI facility is located on approximately one acre of land in Southwest Houston, and is one of the few places in Houston where gas professionals can train on a live natural gas pipeline.

GCI employs industry experts to teach the classes in a way that move seamlessly from classroom theory to real-world application. Courses covered in the boot camp include:

- ♦ Gas Measurement Fundamentals
- ♦ Electronic Flow Meter Measurement Best Practices
- ♦ Control Equipment – Valves and Actuators
- ♦ Electronic Instruments
- ♦ Natural Gas Sampling & Odorization

Taken individually, each course is two days. However, the boot camp condenses learning and travel time, allowing employees to be back at work with all of the knowledge and tools they need to do their job in a shorter time frame.

“With the surging demand for oil and gas, it is more important than ever that employees are properly trained to do their jobs,” said Russel Treat, GCI President. “Proper measurement can have a big impact on bottom lines, and this boot camp ensures that field personnel have official classroom training to add to their on-the-job training. We give supervisors the confidence that their employees are ready to work in the field of gas measurement.”

GCI recommends students have a pre-requisite of a basic two-year degree in electronics or instrumentation or two years of equivalent work experience. Register today by calling (713) 522-2444, or email contact@gascertification.com. Visit www.gascertification.com to see a full class schedule for 2007.

About Gas Certification Institute

Gas Certification Institute (GCI) is a hands-on training facility for oil and gas field personnel. GCI helps companies certify their employees, equipment and processes, so they can meet the unique requirements of natural gas pipeline operations.
